

Basic information about each video including simple metadata

Basic Info

This section is exactly what it says it is. This is where you can put in your title, description, tags, video credits (if any), privacy, playlist (if any) and you can also directly share it to Google+ or Twitter.

- The title depends on the type of content that you will be regularly posting but it's a good idea to plug in keywords and keep it descriptive. For example, adding 'Video' to the title makes it easier for it to be listed on general Google searches, and 'Skoar-Hitman Mission One Gameplay Part 1' will do much better than 'Skoar - Hitman'.
- For the description, Always use the <http://> prefix on any external links, refer to your keyword research when writing copy - especially the long-tail keyterms, use at least a couple of keywords in the opening sentences, link out to your social media profiles, Use the transcript of the video if you have one and link to other parts of a series if they exist.

Tags add to your video's visibility in search results

- The tags should be most used keywords around the topic. Start off with the main keywords around the topic before going onto the general ones.
