

Aside from songs, in the audio library you can also find a catalogue of sound effects which you can use in your videos. This collection is pretty vast and is organized according to categories- like gunshots, animals, sirens and so on. You have the option to mark a particular sound effect as favourite so that you can easily find it later.

Tracking user responses with analytics

Building a strong following for a YouTube channel is something that requires constant improvisation-based on the feedback which you receive. And the precision of your improvisation depends on the quality of the feedback. Thankfully, Youtube's analytics give you some insightful information about the people who watch your videos.

Using the analytics toy can track the traffic of the entire channel or specific videos to see how it varies with time. But that's just the tip of the iceberg. There are plenty of other useful information that you can get from analytics, like these:

Learn, Improve.

Location breakdowns

You get to know where the viewers are from, based on the region-giving you the country or even, the state. The information is pretty in-depth in that you could also learn how many minutes people from each state watch your videos.
