

YouTube, a greater focus was placed on 'likes gained per unit time'. This led to YouTubers acting like over-enthusiastic car salesmen practically begging for likes on each video. However, the algorithm was soon modified and 'likes gained per unit time' don't affect videos by the same margin.

There are different metrics for likes and dislikes but the most common statistic is to maintain something between a 20:1 to 10:1 ratio of likes-to-dislikes on your videos. Also, this ratio is an indicator of how good your videos are. If you make a video that your audience doesn't like then you should expect a drastic change in your likes-to-dislikes ratio. Sometimes, when you change the direction of your channel, you might see a similar drop in this ratio but that's natural. All you need to worry is about losing out too many of your fans.

Analytics

Likes and dislikes are the easiest metrics to help you understand how well a video is doing. If you want better insights for each video and even historical data to chart your channel's growth. The best thing is, you get detailed analytics for free. You can simply login to YouTube and then navigate to [YouTube.com/analytics](https://www.youtube.com/analytics) or click on your account icon and then go to the Creator Studio. In Creator Studio, click in Analytics.

Analytics gives you detailed information about earnings, audience engagement and the different traffic sources giving you traffic. It also
