

includes various filters like Content, Device type, Geography or location, Date or time frame, Subscriber status, Playback type (live or on demand), Traffic by YouTube product, etc.

Take for example the earnings report. It will provide you with how much your videos have earned, over what period and even which advertisement formats have worked the best for you. This highly personalised information is very useful towards optimising your earning potential.

Audience retention report gives you graphical data with information about when your audience left the video or which segments were most popular. You could use this data to figure out what kind of videos your audience likes and you can even build newer video series based on such data. The first 15 seconds form the most important time for your videos. This period is what your audience uses to determine whether to watch more of the video.

Traffic sources reports will show you how viewers are ending up on your YouTube video or channel. These could be internal sources like You-

Retention report tells you which segment was the most popular

Tube search, or related videos or even the trending page if your video goes viral. Sometimes, your video will get shared on an aggregator platform or on social media and you might see a tremendous rise in views. You can utilise this information to decide how to better publicise your videos. You should optimise your video tags and metadata based on such information.

Go Social

We aren't going to harp much about the importance of social media here. We're pretty certain you know it all. However, you should check out tools like HootSuite and Buffer to easily manage all your social media profiles.
