

firmly in the minds, and hands of the entertainment loving audiences. The series' popularity helped it sustain until 1991. In fact, some of the games were so popular that many of them found their way to the company's latter handheld devices as well.

Home console redux

The home console made a huge comeback in 1980 when Atari released a version of the mega arcade hit, Space Invaders. The heretofore unseen success of Space Invaders spurred console manufacturers to try and get exclusive rights to arcade titles. Ads began to pop up, highlighting the fun one could have with their own game console right at home, with all these new games, just in case you couldn't imagine the fun yourself.

Fun makes a comeback home!

The 80s was a decade which saw a plethora of companies – big to small – releasing their own video game consoles. Even though a few among these were technically superior to Atari's model (Coleco Vision being a good example) it was still Atari which spearheaded the console revolution throughout the decade.

While we are talking about the 80s, it's also worth mentioning the importance of the year 1983. It was an year when the video game industry experienced its first crash. The crash was limited to the North American market but back then, it was in North America that the bulk of the market existed.

Ironically enough, it was the higher number of game titles in production which contributed to the crash. Or rather, the fact that most of the games were of low quality. Even Atari – the leader when it came to the home console, came out with a few titles that were booed down by the users – E.T and a new version of Pac-Man prominent among them.

Another reason for the crash was the growing number of home computer users. The revenues generated by the video game industry went down by a whopping 97% during the crash.

The way onwards

The crash of 1983 was not to be the death toll for the gaming consoles. Not by a long shot. In home consoles Nintendo released the Famicom model in
