

was okay but it paved way for a number of amazing sequels, thanks to its use of many new elements in the gameplay.

- **Virtua Fighter** - The game was launched on the Sega Saturn Platform and sold nearly as much as the console, meaning almost every Sega Saturn owner, owned a copy of the Virtual Fighter.

There were a number of other games too which went on to become massively popular with their forthcoming sequels including Virtua Cop and Tony Hawk's Pro Skater 2.

The 5th generation brought about a big change. There was a time when the critics and media were speculating another video game market crash thanks to the large number of consoles and titles in the market. But the reverse happened. The video game industry stabilized soon and new leaders in the console market emerged. Sony was out with its PlayStation which had proved its mettle. Sega and Atari, the 2 giants had somehow fallen far behind and their 5th generation consoles would be their last consoles. Nintendo did well for itself, but it was still way behind Sony and not using a CD-ROM drive had probably cost it the game. All in all, this era revamped the industry and brought in a wave of fresh air, making 5th generation one of the most important of all times.

Sixth Generation

The video game industry has an average product life cycle of 7 years and the 6th generation of video game consoles started in the year 1998 with the launch of SEGA Dreamcast, a last attempt by the giants to gain a market share in the industry. Things started to change around the turn of the century with

Dreamcast was the last console by SEGA.
