

looked to broaden its audience demographic. And it did so with something really interesting and unique that had never been done before in gaming.

The Wii console came with the revolutionary Wii remote which set a trend in motion controlled gaming. The innovative remote was a handheld device that used a number of accelerometers and infrared detection to realize its accurate position in the 3D space. It tried to change the image of console gamers who were imagined to be 'lazy couch potatoes' and pushed gaming as a form of physical exercise.

The console and its controller received a number of awards for outstanding innovation and Nintendo's decision to take the 'road not taken' paid off. Wii has been Nintendo's most sold console till date having sold more than 100 million devices worldwide.

Nintendo Wii won the Golden Joystick for Innovation of the Year 2007

Nintendo came out with a package of games called Wii Sports which featured a number of motion controlled games including tennis, baseball, bowling, golf and boxing. This package came bundled with the console in most of the regions and was one of the contributing factors to the success of the unique console.

The 7th generation of consoles was probably the most successful and trendsetting one. It also offered significant development over its predecessors in every aspect including console hardware, gameplay and visuals. Gaming consoles were becoming a household thing and there were thousands of amazing games and 3 consoles to choose from. PS 3 and Xbox fought hard for a market share and even though PS3 sold more units, both the consoles were deemed a success. Even Nintendo, whose last two generations of consoles hadn't had much success, carved a marketplace for itself. All in all it was a good time to be a console gamer. **d**
