

The PSP was truly portable in the sense that it had amazing battery life and a big beautiful crystal clear display. It packed high processing power and had the absolute BEST gaming titles to its name at the time. It doubled as a media device too. So you could store your songs, photos, and videos etc along with the option of an expandable memory. Also, the PSP had more M-Rated title releases than its predecessors, with titles like God of War, Grand Theft Auto, Need for Speed, FIFA, and Madden to name a few. This made the PSP a classic hit and a huge commercial success.

It was almost like someone attached a screen to the Dualshock controller

5. Nintendo DS

Some consider Nintendo to be synonymous with innovation. This Japanese company always gets the formula right for avid gamers all over the world. The Nintendo DS is a good example of great Nintendo innovation. It featured the signature clam shaped case, which would be the shape of future DS consoles as well. In addition to that, it had not one, but two backlit screens with the lower screen being touch sensitive. This feature allowed the users to interact with games in a way never thought possible before. The Nintendo DS came with a stylus to interact with the touch screen. This was a time when touch technology had not matured yet, so this was pretty exciting for users. Additionally, the Nintendo DS had backward compatibility as well, so you could play your GameBoy Advance games on it too, as well as a range of brilliant games with marvellous graphics and seamless gameplay. The
