

A Ms. Pacman cartridge for the Atari 2600

companies made huge profits on the various cartridges they distributed. The profits for the companies did not just stop with the console getting sold. They would keep rising if they came up with better games to keep the players interested. In 1984, the Commodore 64 was released. This was the first ever gaming console to use disk based data to run the game. Rick Dyer's 'Dragon's Lair' was the first CD based game to be released.

The Commodore 64 was the most powerful processor for that time and was also the least expensive. Perhaps it was even the console that started the cult of the PC master-race.

Then a company which had had recent success in Japan decided to bring their console to the market which would change the gaming industry forever. The company was Nintendo and the year was 1983. Nintendo released their console called the Nintendo Entertainment System (NES). But they were so scared of competition from Atari, that they did not release the product in US. Instead, they licenced it to Atari which was a huge blunder as NES

An old advertisement for the NES with icons like Mario and Kirby.
