

was a smash hit. It was not until 1985 that Americans got to know about Nintendo and the rest is history. The NES also had a cartridge system but the quality of games was like nothing seen before that. Mario became a household name due to this very console. There were hundreds of games to choose from and all unique in their own respect. Thanks to titles like Pac-Man, Super Mario, Zelda etc. Nintendo and Atari were able to make billions of dollars in sales thanks to these cartridges.

No Signs of Stopping

The boom continued throughout the '80s. All this time, games could be played on the PC using a CD or a floppy disk. In 1984, Tetris was first introduced as a game for the PC. All the '80s were dominated by the NES. Then they released handheld consoles to add another feather to their cap. The Game Boy used separate cartridges which were also sold separately like the NES cassettes.

In 1989, NES released the first 16-bit console called the TurboGrafx-16. It was the first system to run video games stored on compact disks. 1989 was a big year for gaming as this was also the year that the true arcade gaming experience was brought to homes as SEGA Genesis was introduced. Games were still largely being distributed as cartridges.

Now even the computers wanted in on the gaming success wave. So the newer computers being built both by Microsoft and Apple had gaming

This console was a true underrated pioneer
