

A quick reminder of how cruel the Gaming world is.

video game burial was the mass burial of unsold video game cartridges, consoles and computers in New Mexico. The goods buried were rumoured to be unsold copies of E.T. The Extra Terrestrial. This event became almost an urban legend of sorts. There were at least 700,000 cartridges including E.T. which were disposed. This event is in a way synonymous to the downfall of Atari as a video game powerhouse.

Video game distribution is a cruel industry. In it, by the time you have mastered the current medium and managed to dominate it, a new, revolutionary medium arrives and throws your plans out of the window. After overcoming a lot of technical and practical problems the video game makes it to your home and you can play it the way the developers intend you to. However we must always remember the long path that lies before us – with the connected services that we have right now and the completely different landscape of gaming that lies before us – the future looks filled with a lot of excitement for everyone in the gaming industry. **d**
