

Not the same in terms of comfort

To be honest you would look ridiculous wearing any of the three headsets, it was never about the style. However, if you prefer your equipment to project a style, then the PSVR and Rift lead the pack. Why these two? Because the appearance varies from person to person. Where PSVR wins with the whites and blue lights for a futuristic look, Rift wins with its mild grey minimalist look. Some might even like how the Vive looks but its bulky Swiss cheese like appearance might not be desired by most.

Content

Each company announced a plethora of content for their VR platforms. But just like any other new entertainment technology, it is difficult for people to spend their time and money in producing content. The risk is too high. Even so, the hype of VR has actually helped pushing VR content at a considerable pace. There obviously isn't a Steam sized library of content or even GOG, but whatever there is, it feels really cool. Just like when the first motion pictures had taken the world by fire, even if they were just single shots of people coming out of a building and a parked train.

'Eagle Flight' and 'Eve: Valkyrie' are one of the few games available on all the three platforms. Eagle Flight is arena based shooter where you play the role of an eagle in a dystopian Paris. Eve: Valkyrie is similar to Eagle Flight, but takes place in space and you control spaceships. Job Simulator is a title which has taken the hearts of many. You play in a future world where all the jobs are done by robots and your entrainment is to actually try out those jobs as they were done by humans.

Then there are platform exclusives.

On the Rift's side of action, there are great titles like the hack-and-slash Chronos and VR visual novel Technolust which don't require the Touch
