

Technically, Xbox Scorpio will be part of Xbox One series and will offer all the advanced features of a premium console for an impressive Xbox gaming experience. Moreover, Project Scorpio is touted to be the last console from the software giant. The main reason is attributed to the fact that the company is planning to attempt a different approach as far as console gaming is concerned from 2018.

Expected to ship with an AMD Ryzen 8 core processor and Vega based graphics, the Xbox Scorpio will be integrated with 12 GB GDDR5 RAM with a maximum transfer capability of up to 320 GB/sec. That said, the

Xbox Project Scorpio tipped to be extremely powerful than the previous counterparts

upcoming Scorpio will be compatible with Xbox One controllers, Kinect including the currently available games and digital Xbox One media content.

According to Dave McCarthy, General Manager, Xbox Services, Microsoft is gearing up to establish

partnerships with retailers to launch trade-in programs. The Xbox Scorpio will work faster than the PlayStation 4 Pro and will cost higher than Xbox One S. Hence, you can expect the price for the default version of Scorpio to be around \$435.

It has been almost confirmed that Scorpio will provide support for premium VR features. This means you require a VR headset to experience the breath-taking visuals. However, Microsoft hasn't yet developed their own VR headset. The much-hyped Microsoft HoloLens is mainly used for augmented reality purposes and not for VR. Moreover, the HoloLens is expensive and not widely available to the general public.

Microsoft can develop a budget friendly VR headset but the chances are slim. Hence, the new console will make use of VR headsets such as the HTC Vive and Oculus Rift. The price factor is very important since customers are always on the lookout for cheap headsets. The main reason is that the Scorpio console might not ship with VR headset. Hence, customers need
