

Plenty of reasons for a PC

This means that by investing in a PC, you can actually get your work, and your gaming done on the same machine, whereas a console is just a single-use machine. And if you're thinking of ways to get HBO Go and Netflix, consoles aren't the only game in town. Not when you can easily get them even on your television.

It's not that PC gaming is devoid of any issues. Many a streaming service still come across as rather convoluted to the layman. And you would probably need to spend a decent amount of time googling for solutions or sifting through Steam forums if a game breaks. Also, things like updating the graphics driver could be a hassle. You know who we're talking about.

But the advantages that PC gaming brings far outweigh the disadvantages. For one, it's way more accessible than it's used to be and to solve any doubts that you may encounter, the resources available on the Internet are practically infinite. Driver updates could be done with just the push of a button and it takes way lesser time than a firmware update on a console.

And the PC gaming is getting better by the day. In other words, this seems like a great time to plug in and start playing on the good ol' PC! **d**
