

MEMORY / RAM

The more you have, the better it is.

Memory helps you run a lot of things at the same time.

RAM or Random Access Memory is named as such because once upon a time, we had 'Tapes' as storage medium. To access data on those tapes, one had to wind them continuously to reach the point where data resided – much like an audio cassette. Electronic, volatile memory was easier to access – you could just ask for data at any address and it would deliver. Therefore, they were named as such.

RAM is also called the Primary Memory and most of the times just “Memory”. The name of “primary memory” is attributed to the fact that
