

to put many Windows machines to shame. It comes in both 13 and 15 inch variants, with the latter having discrete GPUs while the former has to contend with Iris Pro graphics (which is again, better than just onboard Intel HD graphics). Processor choices usually are dual core i5s and i7s on the 13 inch while the 15 inch users can upgrade to a quad core. It's aimed at the mobile working professional, who has slightly more demanding tasks and especially at artists and content creators. Macbook Pros from 2016 (and later) also come with a 'Touchbar' – a long OLED strip placed where the FN keys normally would be. It's an interactive touchscreen that changes depending on which ever application you are running at the time. Both the Macbook and the Macbook Pro are characterised by excellent high resolution screens and even better build quality with the full aluminium unibody chassis. They also have blazing fast SSDs, great speakers, the absolute best trackpad in the market and decent battery life going for them, making them very popular devices. There is also the aging Macbook Air, which spearheaded the whole ultraportable moment. It's a dying line though, with the Macbook Pros going down in size and price (a little at least). Additionally Apple has officially announced there won't be any more updates on the Air line.

What about Windows laptops? While they seem to have the Macbooks beat at least on the spec sheet, you really can't compare the two. Apple's laptops are in a different category altogether and comparing them very mechanically just isn't going to be fair. As they say, Apples and Oranges yada yada, you know the drill.

This is the third year we are seeing the same design. iPhone 8/X better be good!

Mobile Devices

And in the mobile corner, the most popular Apple device – The iPhone. Right now, we are all the way upto iPhone 7 with a new iPhone (hopefully) right around the corner. The design is beginning to stagnate a bit but it's still one of the best built phones out there. While you can't really give awards like best screen and best camera to it (Android flagships have it beat on both accounts), it's a helluva good phone that's a jack of all trades. We're not sure if the 12.9 inch iPad Pro
