

inch and 27 inch models, it holds everything one could possibly seek from a personal computer for everyday use - and more.

Mac mini

The Mac mini offers the entire iMac experience, minus the peripheral hardware and screen. Packed into a slim and trim 20 square centimetre elegant aluminium case, it certainly looks good. A bit of a downgrade from the all-inclusive iMac, it isn't all that great in the specs department with dual core i5 processors, upto 1 TB Fusion Drive, and onboard Intel graphics. We'll talk more in detail about the Mac mini in part 2 of this *FastTrack*.

Mac Pro

The Mac Pro is a hopped up version of the Mac mini - no peripherals, but a beast of a machine chock-full with dual GPUs, Thunderbolt 2 Xeon processors with upto 12 cores, upto 64 massive GB of computing RAM (DDR3 RAM), with an additional 12 GB of DDR5 memory for graphics. The sheer

The Mac Pro - Packs a punch but costs a bomb

beauty of the design of this megalith is sure to keep any aficionado of design hooked. Built into a single elegant charcoal-black metal cylinder, impressively packed in about the size of a 1 litre kettle, it regulates the temperature of its massive computational engine with just a single powerful fan and
