

the price of the MacBook Air was substantially reduced. Apple re-launched the MacBook series in 2015 in thin profile with retina display by removing the MagSafe charging port and incorporating a USB Type-C port.

The devices

The MacBook, MacBook Air and MacBook Pro are the current series of notebook computers available in Apple's portable lineup

MacBook

Touted as the thinnest and lightest notebook, the MacBook features 7th generation (Kaby Lake) Intel Core processors. The notebook bears a thickness of 13.1mm with a weight of 2lb. Moreover, the device is capable of delivering 10 hours of battery life. The SSD storage helps you to get the work done quickly since the reading and writing speeds will be faster than notebooks that run off spinning hard drives. For more info:

MacBook Air

If you look at the MacBook Air, the notebook comes with a 5th generation Intel Core processor, which is older than what you get with the MacBook. While MacBook is equipped with a 12-inch LED IPS

Enjoy computing with the large MacBook Air

display, the MacBook Air features a 13.3-inch LED display. In the case of MacBook, you have a choice of either 256GB and 512GB storage capacities. When it comes to the MacBook Air, you only have 128GB and 256GB storage options. While the MacBook is integrated with a 1866MHz LPDDR3 technology, the Air model is infused with 1600MHz LPDDR3 RAM.
