

2.9GHz clock speed, 256GB/512GB storage, 16GB of 2133MHz LPDDR3 RAM, Radeon Pro 555/560 with 2GB/4GB RAM, Intel HD Graphics 630 graphics with support for Wi-Fi and Bluetooth. The big highlight of the 15.4-inch MacBook Pro is the addition of a 76wh battery with 87W USB-C power adapter.

The 13-inch MacBook Pro is available in 128GB (\$1299) and 256GB (\$1499) storage variants coupled with 2.3GHz processor. However, the touch bar model is available for \$1799 with 3.1GHz processor and 256GB storage and \$1999 for 512GB disk space. You can buy 15-inch model with 256GB and 512GB SSD storage models at \$2399 and \$2799 respectively.

Features

MacBook

MacBook features a Retina display and a capability to RAM up to 16GB. The PCIe-based onboard SSD enables faster reading and writing of data. The notebook includes a USB 3.1 Gen 1 port for fast charging. You can output the display either to a standard VGA monitor or a big television using HDMI adapter.

The MacBook is powered by the latest 7th generation Intel processors manufactured using 14nm process technology. Moreover, the notebook has a fanless design so it is completely silent. The placement of the logic board on an anisotropic graphite sheet helps the device to avoid heat formation. It makes use of a unique terraced battery cell to reduce the size resulting in 35% enhanced efficiency (compared to its predecessors). The second-generation butterfly mechanism keyboard provides great comfort while typing. The Force Touch trackpad offers haptic feedback and pressure sensing features.

MacBook Air

MacBook Air features the same SSD storage technology but you can upgrade up to either 256GB or 512GB. However, you cannot upgrade the RAM. The
