You can also purchase the MacBook series from Amazon India, Flipkart and other leading e-commerce stores. However, the specifications and cost will vary when compared with the US. For instance, the MacBook Pro with 15-inch display, 16GB RAM and 256GB storage is priced at ₹1,45,000. Too expensive? Well, you should keep track of special discounts which are offered during special occasions like the Amazon Great Indian Festival or Flipkart Big Billion Day.

What are MacBooks not good at?

One of the biggest cribs with the MacBook series is the inability to replace battery. You have to approach a service center for the smallest fixes. Moreover, the spare parts will not be easily available for older MacBooks. For example, if you purchase MacBook Air now and if your device needs repair after five years then you will likely face problems with spares. Moreover, the repair and accessories cost are fairly high.

While the learning curve on the macOS isn't steep, getting deep into the system might be difficult to newcomers. Sure you can very easily get the basic stuff done, but if you are not familiar with macOS, then troubleshooting of errors will be slightly tricky. Oh and yes getting official accessories in India is also difficult **d**
