

Photos app will automatically sort the photos and create albums

It also includes Memories tab where you'll find photos and videos that contextually go together, and a map to geotag your photos. You can quickly create video montages of your photos from specific trips using automatic music, text, and transitions. Built-in music based on the moods can be used or you may choose your own music.

Just like iOS, you get memory categories like Recent events, Last Week, Last Weekend, etc. Additionally, you can edit Live Photos using filters and other tools.

Picture-in-picture mode for Safari

There's an all-new picture in picture mode for Safari that lets you shrink the video player in your browser and place it at any corner of your screen.

Now hit Command + T to start tabbed working in almost any app
