

visit. To solve this problem, Safari on the newest macOS High Sierra comes with intelligent cross site tracking prevention. It uses Machine Learning algorithms to stop trackers behind the ads. It is not an ad-blocker and you'll keep on seeing advertisements, but not related to the product you recently browsed.

VR Support

High Sierra brings out of the box support for VR, namely SteamVR with support for HTC Vive. All this time Mac lacked the necessary power to run VR, hence, popular VR devices didn't support Mac. With the Metal 2 technology which aims at giving a graphical performance boost, Mac might now be compatible with the VR headsets. More on this in Chapter 11.

Tabs Interface

Tabbed browsing has always been one of the neatest features of all time. Taking it further, Apple has introduced tabs interface to almost any app and has also provided third-party developer support. In Sierra, Apple adds tabs to Pages, Mail, TextEdit, Maps, etc.

In the Maps app, you can browse multiple locations without losing your place. Third-party apps such as Microsoft Word and Adobe Photoshop are also supporting tabs out of the box.

How macOS ties into Apple's ecosystem

Earlier, Mac OS was an independent operating system in Apple's ecosystem and shared no ties with Apple's other operating systems. However, with ever increasing Mac, iOS, and Apple Watch users that's no more the case. macOS is sharing strong ties with iOS, watchOS, and tvOS by sharing features with them.

Auto unlock using Apple Watch

Starting from macOS Sierra, your Mac can be unlocked automatically if you are wearing an Apple Watch. Unfortunately, only Mac models after 2013 support this feature. To make it work, your Apple watch needs to be running watchOS 3. You should also enable two-factor authentication (not two-step verification). Additionally, both the devices should be signed in to same iCloud account.

First, you need to enable a passcode on your Apple Watch. Wear your watch and make sure it's unlocked for Mac to detect it. You then need to
