

enable “Allow Apple Watch to unlock your Mac” under the Security & Privacy tab in the System Preferences on your Mac. As long as the Watch is in close proximity to the Mac, it will unlock itself.

According to Apple in their keynote, in order to prevent someone from forwarding Bluetooth signal from the Watch using a Bluetooth listener when you are away from the Mac, your Mac will calculate the time taken for the signal from Watch to Mac and back.

Universal Clipboard

Universal Clipboard is a single clipboard across your iPhone, iPad and Mac. If you copy a text or photo on your Mac and want to share it to your iPhone, you can straightway paste it on your iPhone. However, unlike desktop clipboard, the contents of this clipboard are not retained for long. Whatever you copy is retained for two minutes only. Also, this feature works in peer-to-peer fashion, that means nothing is stored on Apple servers.

To make this Universal Clipboard work you need to sign in to the same iCloud account on all your devices, turn on Bluetooth and WiFi. Just like auto unlock, Universal Clipboard keeps a track of the distance between the devices based on the time taken for the signal from the device to Mac. It won't work if two devices are in different rooms.

iCloud Drive

Whatever you save on the desktop can be uploaded to iCloud drive, either manually or automatically. These files can be made available on your iPhone or iPad using the iCloud Drive app.

Apple Pay on Mac

Apple Pay is now available on the web. You can initiate secure transactions right from your Mac without entering any passcodes or card credentials. This handy feature is routed through your iPhone and only works if you have set up Apple Pay on it.

While performing the checkout, you can use “Pay with Apple Pay” option. If you have MacBook with Touch ID then straightway place your finger to make the payment, else it will lighten up your iPhone and more authentication in the form of Touch ID should be done on the phone. This will automatically complete the payment for you. However, not every e-commerce website supports Apple Pay.
