

perform wide range of functions such as calling and messaging including Apple Pay and Siri. Moreover, the watch is compatible with iPhone 5 and above running iOS 8.2 and higher. The Apple Watch mainly works by establishing connectivity via Bluetooth to the iPhone and makes extensive use of Siri. You can request the watch to perform a wide range of activities by simply speaking directly from your wrist. The OLED display on the watch lets you view the content clearly and the rechargeable battery delivers an excellent backup time.

The devices

Apple Watch Series 2 and Series 1

Apple Watch Series 2 (http://dgit.in/apple_watch_s2) features an integrated GPS coupled with water-resistant capabilities up to 50 meters. Powered by a dual-core processor, the display is two times brighter than its previous version. The Series 2 also includes a heart rate sensor and a comprehensive workout app. Apple Watch Series 2 helps you to keep track of activities you do throughout the day. For instance how much you stand, move, and exercise. The information is consolidated and displayed on the watch via concentric “rings” that denote each activity. The watch provides regular progress updates including the ability to share and compare activity rings. You

Track your activity via GPS with Apple Watch Series 2

can also still purchase Apple Watch Series 1 but it's obviously has fewer features. For instance it doesn't have GPS, GLONASS and water-resistant protection.

There are four variants of Apple Watch, which are available in both Series 1 and Series 2 models with 38mm and

42mm cases. The difference is with the colour of the case and band. The silver Aluminum case offers white sport band. If you buy the watch with Space Gray Aluminum Case, you will get Black sport band. While the Rose Gold Aluminum Case is equipped with Pink Sand Sport band, the Gold Aluminum Case comprises of midnight blue sport band.
