

core processor alongside splash resistant functionality. The 38mm model measures 25g for Series 1 and 28.2g for the Series 2. Meanwhile, the series 1 and 2 with 42mm case weighs 30g and 34.2g respectively. You can display relevant information from the apps directly on your watch face. You just need to tap on the launch the app. It is also possible to swap faces by swiping.

Apple Watch Nike+

Apple Watch Nike+ ships with the same internal specifications as other Series 2 watches. However, the watch establishes connectivity with Nike+ Run Club app for tracking and management of running activities. The Nike+ is designed using fluoroelastomer, which reduces the weight. Moreover, the material improves the ventilation with compression-molded perforations along each row. The specially designed faces portray Nike's iconic Volt colour with the display in both digital and analog styles.

Features

All variants of the Apple Watch Series 2 share the same features for all models – whether it's a Hermes edition or Nike+. The core difference is with the design, case and bands used. The Series 2 watches are designed using Sapphire crystal and the OLED retina Ion-X glass display with 1000 nits of brightness and Force Touch screens.

The Apple Watch Series 2 comes with heart rate sensor, gyroscope, accelerometer including Ambient light sensor. Loaded with watchOS 3, the
