

Charge your Apple Watch easily with the dock

which has compression-molded perforations for breathability. Then there's the Apple Watch Magnetic Charging Dock (\$79) which enables you to charge your Apple Watch by placing it in a flat position. Compatible with both 38mm and 42mm models, the dock connects via the lightning port.

There are also third-party accessories such as rugged covers by Spigen. If you want extra protection for your valuable Apple Watch, you can buy Spigen rugged armor case with shock absorption for \$12. Amazon India also sells accessories for Apple Watch but the range is less.

Quirks

Perhaps the biggest problem with the Apple Watch is that it feels like a toy. Not in the build quality or construction – those are top notch – but more in the usefulness department. It falls in the non-essential category of devices. And then to have such a hefty price tag makes it even more of a luxury. Another small niggle with the Apple Watch is related to the size of the strap or band. If the band doesn't fit your wrist, you won't be able to take full advantage of the watch. Outlier cases of course but yes it's happened. The second issue is with the battery life. You are required to charge it every day, which is not always possible if you are travelling. This is not so much a critique of the Apple Watch specifically but a critique of battery tech altogether. When will we have devices that will last of weeks without visiting a charging socket? Coming back to the watch, it is currently only compatible with iPhones. What's up with that? Oh and Siri still struggles
