

the face of your watch, based on the time of the day, your past activities and other personal information which it keeps on monitoring regularly.

- Keeping up with the Disney legacy, there are a couple of other watch faces, which though not as useful as the Siri face, are cool to look at regardless and include, Woody, Jessie and Captain Buzz lightyear from the Toy Story series.
- The music app is redesigned and much more feature rich now. You can scroll through the album art using the digital crown. The app will also show you Apple curated playlists according to your taste alongside the playlists and songs you most listen to.
- One of the most used features of the Apple Watch has been the Activity and Workout apps that come along with it. Machine learning is being implemented everywhere and the watch is getting smarter in general. Apple claims that it will automatically detect when you are resting at the shallow end of the pool and stop the lap and start another on its own. If you workout in a gym that has NFC enabled equipment (which the chances it doesn't. Yet), you can connect your watch to the equipment and exchange data

There are many more features and applications that are going to come out with this version of the OS like Glucose monitoring and the ability to use Apple pay straight from your watch.

This update will make Apple Watch smarter and better, giving serious competition to Android Wear 2.0 which was released earlier this year.

WATCHKIT - What it is and how the Apple Watch works

WatchKit is the framework that contains everything needed to create an application for the Apple Watch including all the necessary classes and the WatchKit extension. Before you go back and reread the sentence to understand if you read it correctly or it is a print mistake, let us tell you that it's not a mistake, because the story is a little complicated. Let's start again.

WatchKit

The WatchKit framework comes bundled with extensive documentation and various resources are available online that can kickstart you into developing apps for the Watch
