

comfortably anywhere around the house or office. Compatible with iPhone 5s and above, the speaker will be available in space gray and white color variant for \$349. You should note that the HomePod will work only with iOS 11 and above versions. Initially, the speaker will release in the US, UK and Australia.

Features

Apple HomePod features an upward-facing woofer designed by the internal product team at Apple. The speaker is powered by an Apple A8 processor, which does some amount of software level signal processing before outputting from the transducers. The unit delivers deep bass with low distortion. Moreover, the HomePod includes a customized array of seven beamforming tweeters alongside its own amplifier to deliver powerful 360-degree audio.

Moreover, even if you are standing away from the gadget, you will be able to communicate without any problem due to the addition of spatial awareness technology.

The automated room-sensing feature of the HomePod enables great sound irrespective of placement such as corner, table, or bookshelf. The
