

predecessors, the new Apple TV features an App store that allows users to download from over 6,000 apps. Also, the set top box provides content from over 1,300 video channels.

Unlike iPhones, Apple TV might take time to make inroads in India, as domestic competitors like Tata Sky, Dish TV etc. offer both domestic and international content relatively cheaper and without the need for internet connections.

Devices

Apple TV's current device - Apple TV 4 is slightly cooler with its new features. In terms of performance and looks, the 4th generation picks up lead with better connectivity options – HDMI 1.4port and USB-C port, as the third generation had the usual HDMI and Micro-USB. Looking at the remote, the 4th series has a black lustrous aluminium body and an advanced Glass Touch surface with the usual buttons as on 3rd generation. Apart from the Remote, the ability to execute Siri voice commands is a nice feature bundled with the device.

Apple's 2nd Gen Apple TV is powered by an Apple A4 processor and the Apple TV 3rd Gen models are powered by an Apple A5 processor with 512MB Ram and 8GB flash storage, both with a single processor core.

On the other hand, the Apple TV 4th Gen model has a much faster dual core 20nm Apple A8 processor (APL1011), 2GB of RAM, and 32GB or 64GB of flash storage.

With new tvOS 9.0 Apple TV 4th Generation has a much larger feature set. We'll be talking more about tvOS in the next edition of this two part *FastTrack* series.

If you chronologically chart the major capability upgrades so far, you'll see that the 1st gen device brought in 24 fps h264, the 2nd generation's claim to fame was 720p support, while Apple TV 3rd and 4th generation both support 1080p video. Rumour has it that the fifth generation Apple TV might include 4k capability along with tvOS 11.

The current generation has its software redefined and third party apps are released that extends its capabilities. The difference in software pushes back third and second generation series as the two will limit the life of the device in both technology and content.

Apple TV 4th Gen is fairly advanced compared to its predecessors, whether you look at its performance, functions or support. The only troubling factor is the price tag of \$149 (32GB) and \$199 (64GB) while the
