

show for you or navigate through content, and access weather information. Though some of these services are region locked.

The remote sports a classic Apple design, which is minimal at its core. It has a glass touch surface with navigation circle at the top, a Menu button, search button, home button, a Play/Pause button and volume up/down button which controls your TV's volume too, so you don't need two separate remotes. The remote has a lightning connector for charging, rechargeable battery which lets you use it for months on a single charge, where conventional daily usage is a given.

The built-in accelerometer, gyroscope and touch surface on the Siri remote give developers the leverage to come up with exciting new games and apps unavailable on TV before. It also makes the user experience quite personalized with its precise tracking of touch movements, and at the same time giving users the traditional option of using buttons.

Features

The 4th generation Apple TV which was introduced almost a couple of years ago, comes with a brand new operating system, called the tvOS. Incompatible with earlier generations of Apple TV, the new OS contains an app store which allows third party developers to release their
