

applications on the new Apple TV App Store, enabling them to reach customers directly.

Apple's new product has a sorted way to go about. You just need to connect it with your HDTV and a Wi-Fi network, and you are good to go. It also supports Airplay, a hassle free feature that lets you stream media through your iPhone, iPad and Mac.

The Apple TV has a number of features that you may use to customize your TV experience. Some of these include voice over, zoom, bold text, increase contrast, etc.

As mentioned earlier, you can access photos on Apple TV, and it supports JPEG, GIF and TIFF formats.

One of the most interesting features of the latest Apple TV is Siri voice control. Siri can perform functions of a remote like play, pause, and even

The Apple TV user interface

entertain search requests for particular shows. It can also fast forward, rewind a particular show by 15 seconds.

The tvOS is very similar to iOS 9 and allows users to modify the Apple TV in different ways by pairing a third-party universal remote, and controlling games by pairing an MFi Gamepad, and also pairing a Bluetooth keyboard to enhance user experience.
