

Apple has optimised its software to make it accessible to those who are visually impaired. Apple TV's screen reader VoiceOver is available in over 30 languages; it enables visually impaired users to know what is on the TV display and respond according to on-screen prompts.

Closed captioning is also available for those with hearing impairment. It is supported on Apple TV irrespective of the new operating system.

Audio formats of MP3, protected AAC files, Dolby Digital 5.1 and Dolby Digital Plus 7.1 are also supported on the new Apple TV.

## Accessories

In the box you get Apple TV, Siri remote, a power cord, Lightning to USB cable, and of course, documentation. The HDMI cable is sold separately and is a must to run this Apple device.

Since the 4th generation Apple TV has lent emphasis on graphics and software to enhance gaming experience, a SteelSeries Nimbus wireless gaming controller will up the game with its ergonomic design and more than 40 hours of game play with a quick charge enabled through a Lightning cable.

There are mounting bases for both the Apple TV and the Siri remote, which give that extra amount of protection to your precious devices. The Innovelis TotalMount Pro mounting system for Apple TV attaches directly to the back of your TV. It also comes with a charging remote holder which you can attach to the back or side of your television.

There is also a remote loop for your Siri remote, which has a band-like loop that goes around your wrist and has an extended end attached to the remote.

Another accessory, which will enhance your Apple TV experience and the hole in your pocket, is the Beats Solo3 Wireless On-Ear Headphone, whose built-in mic and on-ear controls will make taking calls, activating Siri an easy job.

## Quirks

One of the major drawbacks of Apple TV 4 is the lack of support for 4K content, which technically sets it behind its competitors Chromecast Ultra and Roku Ultra. However until 4K content is abundant perhaps this is just an on-paper drawback.

Secondly, while Apple has added music controls to Siri, they are limited; the on-screen keyboard has done away with the grid-system and takes forever to type in passwords or searches.
