

iPads to ensure that players get a good gaming experience. Now you may ask, why give all the attention to gaming on this particular platform and not to their desktops? The answer is simple – consumers. Mobile users and casual gamers are a significantly large consumer population as compared to hardcore gamers who need high end rigs. Similarly, specialised content creators (the kind that Apple targets with their iMacs and MacBook)s are also a much larger consumer market than gamers. Apple is familiar with a certain type of consumer and perhaps this has deterred them from investing in the gaming market despite all indications of it being on the rise.

That being said, it's not impossible to game on a Mac. You could still play most of the latest titles, albeit, on low to medium settings and not very high resolutions either. You can also forget about VR gaming, at least for the time being. Only the most expensive Mac supports VR, so if you're in the gaming market looking for 4K or VR, you're out of luck with Apple.

Now that we've gotten that disclaimer out of the way, let's get to gaming on Apple. We'll start with their more popular gaming platform, the iPhone and iPad.

Gaming on the iPhone/iPad

Apple has reason to make gaming enjoyable on their iPhones and iPads. It's one of the pros of having an iPhone or iPad. You'll find that everyone agrees that the gaming experience on either the iPad or iPhone is quite

Everybody recognises these two devices
