

The Siri Remote is more than enough for simple games, which is about all you'll be able to game on an Apple TV. Older games that have been ported to smartphones will be playable, since the hardware can support those, but it'll be pretty messy unless you invest in a compatible bluetooth controller.

In conclusion, it doesn't look you'll be able to seriously game on the Apple TV anytime soon. It doesn't look like Apple intended the Apple TV to be a gaming console either.

So, can we game on Apple yet?

The saying, "Macs are terrible for gaming", still applies. Just not to the extremes that it did when the sentiment first originated. You have a large selection of games to play on the Mac, albeit, not at the best quality but they're there. Then you have their mobile devices: the iPhones and iPad, which could arguably be called the best when it comes to handheld gaming, save Nintendo's consoles. The Apple TV is a terrible gaming console for your TV, but it's great at whatever else it does – this seems to be a common theme with most of Apple's products.
