4 vs 4s: They pretty much looked the same

iPhone 4s. The S this time stood for Siri. It featured the same exterior as the 4 but upgraded the SOC from A4 to A5 and the camera module got an update as well. The 4s shipped with iOS 5 but Siri, Apple's voice activated digital assistant, among all the other new features, helped drive a lot of sales for the 4s, making it the best selling iPhone ever made. The 4s is also the first iPhone that supported 5 major versions of iOS.

5 , 5s and 5c

The iPhone 5 again featured a radical change from previous generations. Gone was the steel and glass sandwich. The new iPhone boasted an all aluminium frame, making the iPhone 5 lighter while increasing the screen size to 4 inches from the 3.5 that had been the norm. Apple also ditched the 30 pin connector and made the switch to a newer proprietary connector – Lightning. The reception was quite favourable but the iPhone 5 had the shortest lifetime of all iPhones at just 12 months.

The reason for such a short lifetime is the iPhone 5c which was launched along with the 5s in 2016. The 5c was basically just a rebadged iPhone 5 with a colorful hard plastic shell instead of aluminium and sold as a budget option. This has been widely regarded as a terrible move as the price differential between the 5c and the new and much
