

This took “courage”. Yeah, right.

7 and 7 Plus

The first time that a new generation of iPhones did not feature any major design changes from the previous generation. The 7 and the 7 Plus share a similar externals to the 6s and 6s Plus but have some feature upgrades like dust and water resistance, a new home “button” which in reality is just a pressure activated sensor, and no 3.5 mm headphone jack. There is also the customary processor and camera upgrades, especially on the iPhone 7 Plus, which features a dual camera setup. The iPhone 7 Plus also has an extra gigabyte of RAM, pushing the total upto 3.

What's Next?

iPhone's generally enjoy a strong brand loyalty and people even buy them just as a status symbol, so a new iPhone model inevitably ends up selling. Once people are entrenched in the ecosystem, everything just works and clicks together, they develop a kind of inertia and would much rather stick to the same ecosystem. The level of connectivity between your iPhone and a Mac is unparalleled. Other people just want a no frills reliable phone that does everything they want and does it well. Although the latest iPhone 7 received some flak, for using the same design and build for the third year running and garnered a lot of controversy for removing the headphone
