

this we're looking at the 5th iOS 11 Beta being shipped out. So we have a pretty good idea of all the new features that are making their way into the latest version of iOS. Here's everything that's new with iOS 11.

- **New Files App**

The iOS Files App makes manipulating files and folders a lot more similar to the manner it is done on the desktop Mac OS. You can switch between views, drag and drop files and folders and even have different panes for different views. The files

App will not be a default install, rather it's something you'll have to get from the App store.

- **App Dock like Mac**

There's now a dynamically accommodating Dock in iOS 11 which not only floats above the screen at all times but will also allow you to add app shortcuts to it. Another thing it can do is present you with suggested apps to perform certain actions with whatever you are currently interacting with on the screen.

- **Slide over / Split view / PIP**

Like the Galaxy Note series, Apple will have split view with iOS 11. You will also be able to slide stuff over each other and switch between them as and when needed.

- **Drag and Drop**

Move text, files and photos from one app to the other on the iPad with this new feature. You'll first experience this with the new Files app or if you are sending an email to someone and you wish to embed rich multimedia without having to run to the nearest PC.

- **Apple Pencil additional features**

Pencil will allow you to add markups onto HTML and PDF files. So you can
