

access to the App Store and media content and games could be downloaded to the appleTV.

Apps especially made for the tvOS started getting released. Apart from games and music apps, there was a whole new wide range of Apps that provided streaming of sports channels and live on demand content. Let us have a wider look at the features and functionalities of the tvOS.

The modern AppleTV with the Siri Remote

The tvOS

One of the main upgrades with tvOS 9 was the added support for Siri. You could now do tasks like rewind, forward, pause etc simply by commanding Siri. The Siri Remote had in built HDMI-CEC support for Apple TV and you could even connect a third party universal remote. Apple has been able to maintain a slow yet steady growth in the sales of the AppleTV over the years. It has not been their best selling product and sales have been estimated to be over 30 million. “We’ve come a long way and it gives us a platform to build off of,” Tim Cook said of the \$149 device at the company’s recent earnings call about the Apple TV. “We are learning a lot about the original content business and thinking about ways we could play it.”

tvOS has VoiceOver, Zoom and Siri to help it’s visually impaired consumers. VoiceOver enabled users to know the visual prompts on the screen. You can also pair a bluetooth keyboard with it and use it for any purpose. Although it was designed to work with the Apple Wireless Keyboard, it works with just about any BT keyboard.

Another interesting feature is the ability to connect a third party controller, or use the Siri Remote or the iPhone, iPad or iTouch to play games. There are a loads of third party games available on the AppStore and some of them are even developed especially for the Apple TV. You can access Apple Music and iTunes seamlessly. Apple’s Remote app on iOS devices enables users to connect their Apple touch devices with the Apple TV and enhance the interface.

Other features include HomeKit to control the Apple HomeKit accessory from the AppleTV and Developer Tools, which was for the developers to work
