

around with SpriteKit, SceneKit etc. The subsequent software updates saw security and bug fixes and general performance and stability improvements. The 10.2 firmware update added a new 'TV' app which is an app for increasing the accessibility of the AppleTV.

Few interesting Apple TV Apps

1. Earthlapse TV

There are 18 masterfully crafted views from the ISS which this app lets you experience from your living room. You can select soundtrack, speed or color filters as you bask in the peacefulness of gazing at the earth from above. Made specially for the Apple TV

2. Netnewswire Today

Using this app lets you share news feeds from your iPhone to the television where it is displayed in a brilliant design. The dimensions of the headlines work really well and it turns your television into a suitable screen for reading news feeds.

The interface of tvOS was designed by keeping simplicity in mind

3. Streaks Workout

In theory with this app you don't need a personal trainer. You just need a television screen and a hell lot of motivation (not included). You can select from a variety of exercises and craft a workout plan which works for you. You can time yourself, count the burnt calories and view your progress. This is a great application for home workout sessions.
