

through the apps they have created. The iPhone users in the US have spent \$40 per device for in-app purchases in 2016. As per a report released in May 2017, Apple has paid \$70 billion to app developers. There are over 200,000 apps on the store that are developed by Chinese developers. In terms of revenue, the US tops the list with maximum generation followed by China. Facebook and Facebook Messenger have emerged as the most popular app downloaded from the store.

What's in 'store' for the future?

Apple has announced that they will unveil a new design for the App Store. The next-generation App Store will have must-read stories, suggestions from experts, carefully crafted lists including how-to tutorials. Moreover, the company will also integrate new ways to locate a specific app or game. The store will be refreshed with new tabs filled with content, which enables you to easily discover the app. The upcoming daily stories feature will explore the real facts behind the apps. You will also learn how apps create a positive impact in the daily life style. The tips and tricks module will provide articles and tips related to various topics and apps. The lists section will help you to locate the best apps specific to a category. You need not have waste time by searching since the lists will help you to find a perfect app. The new App Store will have a game and app of the day section, which will be handpicked by the editors. We expect that the new App Store will be unveiled during the iPhone 8 launch in September or October 2017.

And what about iTunes? What are some of its star features today?

With iTunes, it is possible to create playlists including the ability sync with your iPhone, iPad or iPod touch and stream to an Apple TV. You can listen to plenty of customised on-demand radio stations if you have an Apple Music membership. The software automatically suggests new music recommendations based on the past activities and purchases. With trending search feature, you can drill down the results based on the album, artist or genre.

Apple has integrated Siri with Shazam app using which you can identify the various music parameters just by asking "What Song is this?". You can purchase the relevant song directly from iTunes Store or can add to the wish list for future use. Sharing is caring. You can enable family sharing in iTunes to enable six people to share your collection. If you buy a new song,
