

recognisable calling card has to be her dry sense of humour. Before Apple white washed its language, Siri was capable of using cuss words with an alarming regularity. The current version can tell you a joke, plunge you into the absurd depths of an existential crisis, insult your best friend, or call you a loser - all at sound of your voice.

10 years ago, conjuring up an AI voice assistant capable of all this would've taken a figurative leap of imagination. Now, we're at the cusp of a revolutionary change.

It's an AI eat AI world: Siri's many competitors

With the incredible success of Siri, tech giants everywhere have started excavating CALO to model their own voice assistants. Google has Google Now (or Assistant), Microsoft has Cortana, and Amazon has Alexa. We are staring down a future where technology understands us much better than we understand technology. Shawn Carolan (a Siri investor) says "Take everything you do in a day and just condense it down from 15 minutes down to 30 seconds. You can just express your intent, and it gets done. You just became a 30 times more powerful human." Dug Kittaus adds, "The future

Alexa, Cortana, and Google Now are all competing for your attention

of virtual personal assistants is to make it so we don't have to think so much and work so hard to do things that are possible. It's less about survival and more about exploring the world."

Such leaps and bounds in technological conventions were met with societal conventions. Upon being asked questions about certain controversial issues, Siri has had very politically incorrect answers.

Navigating the waters of the politically correct: Siri's Odyssey

It is unfair to say that this is a Siri-centric problem. Voice Assistants everywhere have had controversial issues turn up on their doorstep every now and then. In 2015, when asked the definition of the word b**ch, both Google Now and Siri replied that it was 'black slang'. Earlier, Google Now
