

Also there is something called the My Photo Stream, which uploads your most recent 1000 photos to the cloud, and holds them for 30 days. This isn't a part of your regular iCloud account.

What if you want to opt out of the ecosystem. What's the competition?

Overall, Apple Photos is a good application designed to satisfy most of the imaging related needs of an Apple device user. But there would still be users for whom this isn't enough.

Maybe the iCloud storage isn't enough for you or you need more advanced tools, there are a number of reasons which can make you look for alternatives. And if you are looking for one, you don't have to look further away than Google's imaging application. So let's take a look at what makes Google photos a worthy competitor.

- You can back up unlimited number of photos using Google Photos. Yes, unlimited. Though there's a little catch – the maximum size of a photo can be 16 MP and videos recorded at a maximum of 1080p, which should be enough for most people. But if it isn't you can always backup the original photo to your Google Drive storage space which is still cheaper than iCloud.
- Google photos comes with standard editing features that let you edit the brightness, Contrast, Shadows and colours, and filters. Though Apple Photos comes packed with more editing features, specially the macOS version
- The search giant has something called Smart Search in their photos application, which lets you search through your photos quickly based

Pricing Guide

Get started with 15GB for free or upgrade to a premium plan.

100 GB	1 TB	10 TB
130 INR / month	650 INR / month	6500 INR / month

Google drive (above) and iCloud offer storage space at an almost a similar price
