

on objects, people, times etc. Apple is working towards making its search better and is slated to come up with some new features in the upcoming iOS 11 and Mac OS High Sierra.

What the future holds?

Apple has many updates slated for release before the end of this year, including a new iPhone, iOS 11 and the next version of macOS. This also means an updated version of Photos. Let's look at what's to come.

- The thumbnail of Live Photos will be editable with the option of trimming live photos available too. New effects like Bounce and Loop are also planned which will make Live Photos, GIF-like. Also GIFs can now be viewed in the Photos library, a feature that has been missing for quite some time.
- There will be more types of Memories, including categories like Weddings, birthdays, pets etc and is faster and more efficient. Also there is slated to be an optimised portrait view for the Memories videos you create.
- Apple has been working on its compression algorithm and now claims that you will be able to store twice as many photos on your device with iOS 11. A welcome update for sure.
- The macOS High Sierra version of Photos comes with a better machine learning algorithm at its heart that has increased its search capabilities.
- There will be more extensions that add more editing tools to Photos increasing its photo editing capabilities. Also there will be new tools which include levels, curves, sharpness and noise added to Photos.
