

Integration with the ecosystem

Apple CarPlay brings support for Apple applications including Podcasts and iBooks. In India, only Apple Maps is not offered in CarPlay systems as against the ones in the international markets. Apple Maps doesn't work too well in India and perhaps it's a good decision by Apple to not bring it to CarPlay in the country.

However, the India trim of Apple CarPlay does not get any third party app-based navigation support either, and the host of third party applications available for CarPlay in India is only at about 15, and that too not the apps that you would mostly use. One big third party app that could have

Maps updates the parked car location, despite not being offered in India

made a whole lot of difference here is Google Maps. The likes of Spotify and Pandora do show up if you have them downloaded on phone, but they do not work in India either.

The only case where Apple CarPlay synchronises well with iOS is to update your parked car location as soon as you reach a destination and switch off the system. The phone uses the Apple Maps present in your iPhone and updates its last recorded GPS position on it, in case you forget where you parked.

Apple faces Android again

Built by the Open Automotive Alliance, Android Auto is CarPlay's exact counterpart, giving Android phones a personalised interface on their car
