

- **Microsoft - Microsoft Office**

Microsoft's Office mostly defined office productivity suites in the offline world. Even though they were lagging behind with their online offering, with Office Online and the subscription based Office 365 they've more or less caught up.

Creative Productivity

- **Apple**

If you are a designer, or know a designer, then chances are that you are familiar with the bias towards Macs in that community. And that bias isn't unfounded. Even with the same software available on Windows and macOS, the latter offers a lot of features and tweaks that take the ease of use to another level. Simple things like drag and drop, system-wide character map, attention to colour management make Macs a leading choice among a certain area of design - specifically, graphics and fashion designing.

- **Microsoft**

When it comes to 3D design applications meant for interior design and architectural work, PC takes the lead with powerful software such as AutoCAD available. The same software is usually available on Mac but as weaker counterparts.

- **Google**

With Google, short of using web apps like Pixlr, which, as any designer would tell you, are a nightmare to use compared to using dedicated software, you really don't have any options at a desktop level. The upcoming Chromebooks with Android support might be able to remedy this.

Gaming

Desktop

- **Apple**

Gaming on a Mac – that's not a phrase you hear often. While it is true that most of the older titles do not support the macOS, of late we have seen quite
