

a few macOS compatible titles. Almost 30% of titles on Steam are macOS compatible. Although, that should not get your hopes up as pretty much every recent major AAA game is Windows exclusive for now. So if you're looking at playing a round of PUBG on your Macbook Pro, you are in for some disappointment....unless you use BootCamp to run Windows on it, which, well, might feel like cheating! On top of that, your hardware options are limited to what Apple offers. For instance, the highest-end Macbook Pro that you can get right now is at around ₹2.3 lakhs and offers nothing close to what a similarly priced Windows laptop would give you.

- **Microsoft**

Thanks to affordable rigs compared to competing ecosystems, combined with the wide variety of titles available on platforms like Steam, Origin and more, it is no surprise that the PC master race exists and thrives on the Windows operating system. Not much explanation needed here.

The PC Master Race

- **Google**

With the upcoming Android support on Chromebooks, you can hope to play some Android games on most Chromebooks that support the feature. Anything more than that? Google would like to pass on this one.

Mobile

- **Apple**

This is where Apple's main focus lies in the world of gaming. And the reason is simple - there are more casual gamers using iPhones and iPads than there are serious high-end gamers who could potentially use a Mac. The overall gaming experience on the iOS platform is actually pretty good.

Developers prefer making games for iOS because at any given point of time, Apple supports a maximum of 5-6 iOS devices. Testing for those is straightforward task. Also, iOS users are more likely to pay for a game, as much as 33% more, than their Android counterparts.
