

Even as a user, you can be assured that you will have the same level of experience across multiple iOS devices that you own. Additionally, due to strict hardware standards, games generally perform better on an average on iOS devices. Apple takes this one hands down.

- **Google**

Even with a rich ecosystem, there are a number of issues with gaming on

Android. These issues can range from game availability to security. Overall, go for Android if you are a casual among the casuals of mobile gaming, but if you take your smartphone gaming seriously and want a genuinely bug free, high quality experience, you are better off with iOS.

- **Microsoft**

It suffices to say that Microsoft is as bad at mobile gaming as it is good at the desktop side of it. There's barely anything to play that won't crash or offer a horrible experience as compared to other platforms. Stay away from Windows phone if you are into mobile gaming.

Smartphone Device

While Apple smartphone ecosystem is limited to its own phones, Google also allows OEMs to use its Android operating system, making the Android smartphone market much wider, deeper and fragmented at the same time. When it comes to device quality, it is hard to compare an iPhone with any particular Android flagship, although the Google Pixel is positioned as Google's answer to the iPhone. While individual components and features might work better or worse on either, which one takes the lead really depends on your overall preference for your smartphone ecosystem.

CONSOLES

Microsoft is the only one among the three that even has a dedicated console that can handle AAA titles. So, clearly it wins. Although Google comes a distant second with its Android TV based offerings.
