

Operating System

Comparing smartphone operating systems in-depth isn't an easy task. Trust us, we know (<http://digit.in/WBestMOS>). But there are certain broad parameters that make the decision more straightforward. If you favour customisations and access then Android is the one for you. But on the other hand, if you value an unbroken experience that does not falter at what it does, then an iPhone could be a better deal for you.

Music

• Apple - Apple Music

There's not much difference among the services when it comes to the content on the platforms. Apple Music boasts of 40 million plus songs, and the application offers the same ease of use across platforms as is characteristic of the Apple ecosystem. For audio quality, Apple sticks to a standard 256 kbps, but can drop it to 80 kbps on cellular networks. As of now, iCloud

Music Library allows you to sync your music between your devices, with the standard free limit of 5GB per account. Compared to Google, Apple does not allow you to play music on multiple devices on the standard membership – although you can do that on a family plan of ₹190, which comes down to a ₹32 per device compared to Google's ₹8.9 per device.

• Google - Google Play Music

Beyond Apple Music's features, Google also allows you to upload up to
