

business offers, your business category and the desirable monthly budget, and Express takes care of the rest. If you aren't sure about your daily or monthly budget, it also recommends an amount based on your business category. Of course, you can't specifically target the desired keywords since the entire process is automated by the service. However, if you're a beginner or single owner of a business, Express seems like the best option until you want to scale up, in terms of budget, time and effort.

AdSense

With AdWords taken care of, we move on to website owners who wish to earn money from ads. They can either place their own native ads or use Google AdSense to place display ads wherever they want on their website. With AdSense enabled, you can have ads displayed on your website across any type of device using the web browser. These ads can be in the form of text, image, and videos. In order to start earning money through AdSense, you need to have a website or blog of your own. The website should consist of dedicated spaces on the webpages where the ads will be placed.

Since there are thousands of websites trying to make money through AdSense, it's quite competitive. Hence, getting the best ads displayed on your website isn't always a guarantee. Your website should offer something unique and if the content is plagiarised, Google will detect the copy eventually which will affect the visibility of your website. Duplicate content is penalised by Google. When you're signed into AdSense, you will need to verify that you are the owner of your website and then submit for a review. It takes about one or two weeks for your website or account to get approved by Google. If everything is done right, you could be approved in as little as two days.

To accommodate websites with different layouts, AdSense supports various types of ad formats – the way ads are displayed on webpages. They include text ads that have a simple heading and text along with the website address. They can be display ads which is the most common ad format you've see on websites. These are essentially the banners you see all across websites in squares and rectangles, horizontal and vertical. Display ads support rich media as well, so ads in the form of GIFs and videos can be enabled. Once you've selected the ad format, you now need to assign a placeholder for them on your webpages which needs to be done manually. The required code for the ads have to be inserted into your webpage's source code, telling it where you want to display the ad. As you already know, ad
