

in 2016), brings virtual reality to your smartphones – a versatile new interface for the exact same hardware, just by adding on a new accessory. This is really the true advantage that Android has over all that came before it.

Google's Play Store

Android blew all competition away, and companies such as BlackBerry and Nokia, which seemed untouchable at one stage, are all but forgotten today. Because Android is open source, it's also available to many more manufacturers looking to start their own brands, and we now have an Android phone for pretty much any budget possible!

Since all of the phones across all of the budgets have the same OS powering them, they can all access the same market place (something you couldn't do in the old BlackBerry and Nokia dominated days), and it's Google that controls that market. Games also got a serious upgrade thanks to the much larger screens, and in just a few short years we went from playing basic games like Snake to games like Temple Run and Angry Birds!

Critics of Android point out that many Apple apps work better than their Android counterparts – Snapchat for iOS is famously better than the Android version. However, Android benefits from Google's search giant status, and finding Apps on the Play store is a lot easier. Not only are many Android cheaper than they are on Apple, it has the benefit of Google's immense Google Account network, which allows you to search for and install apps from your desktop or laptop, without ever touching your phone!

The Google Play Store has the largest library of books, applications and movies, all at one place
